# Introduction

## What we achieved in this study

A rare disease database was developed to implement RAG system that outperformed standard GPT-4o in multiple evaluations.

# Backgrounds

## What is Rare Diseases?

### DEFINITION

US

Diseases Affects less than  
**200,000** people

EU

Diseases affects less than  
**1 in 2000** people

### TYPES

There are approximately

**7,000** rare diseases exist

### EFFECT

# Backgrounds

## Small number of patients

## Insufficient knowledge on Rare diseases

## Difficult to obtain accurate information

# Backgrounds

## What we develop in this study

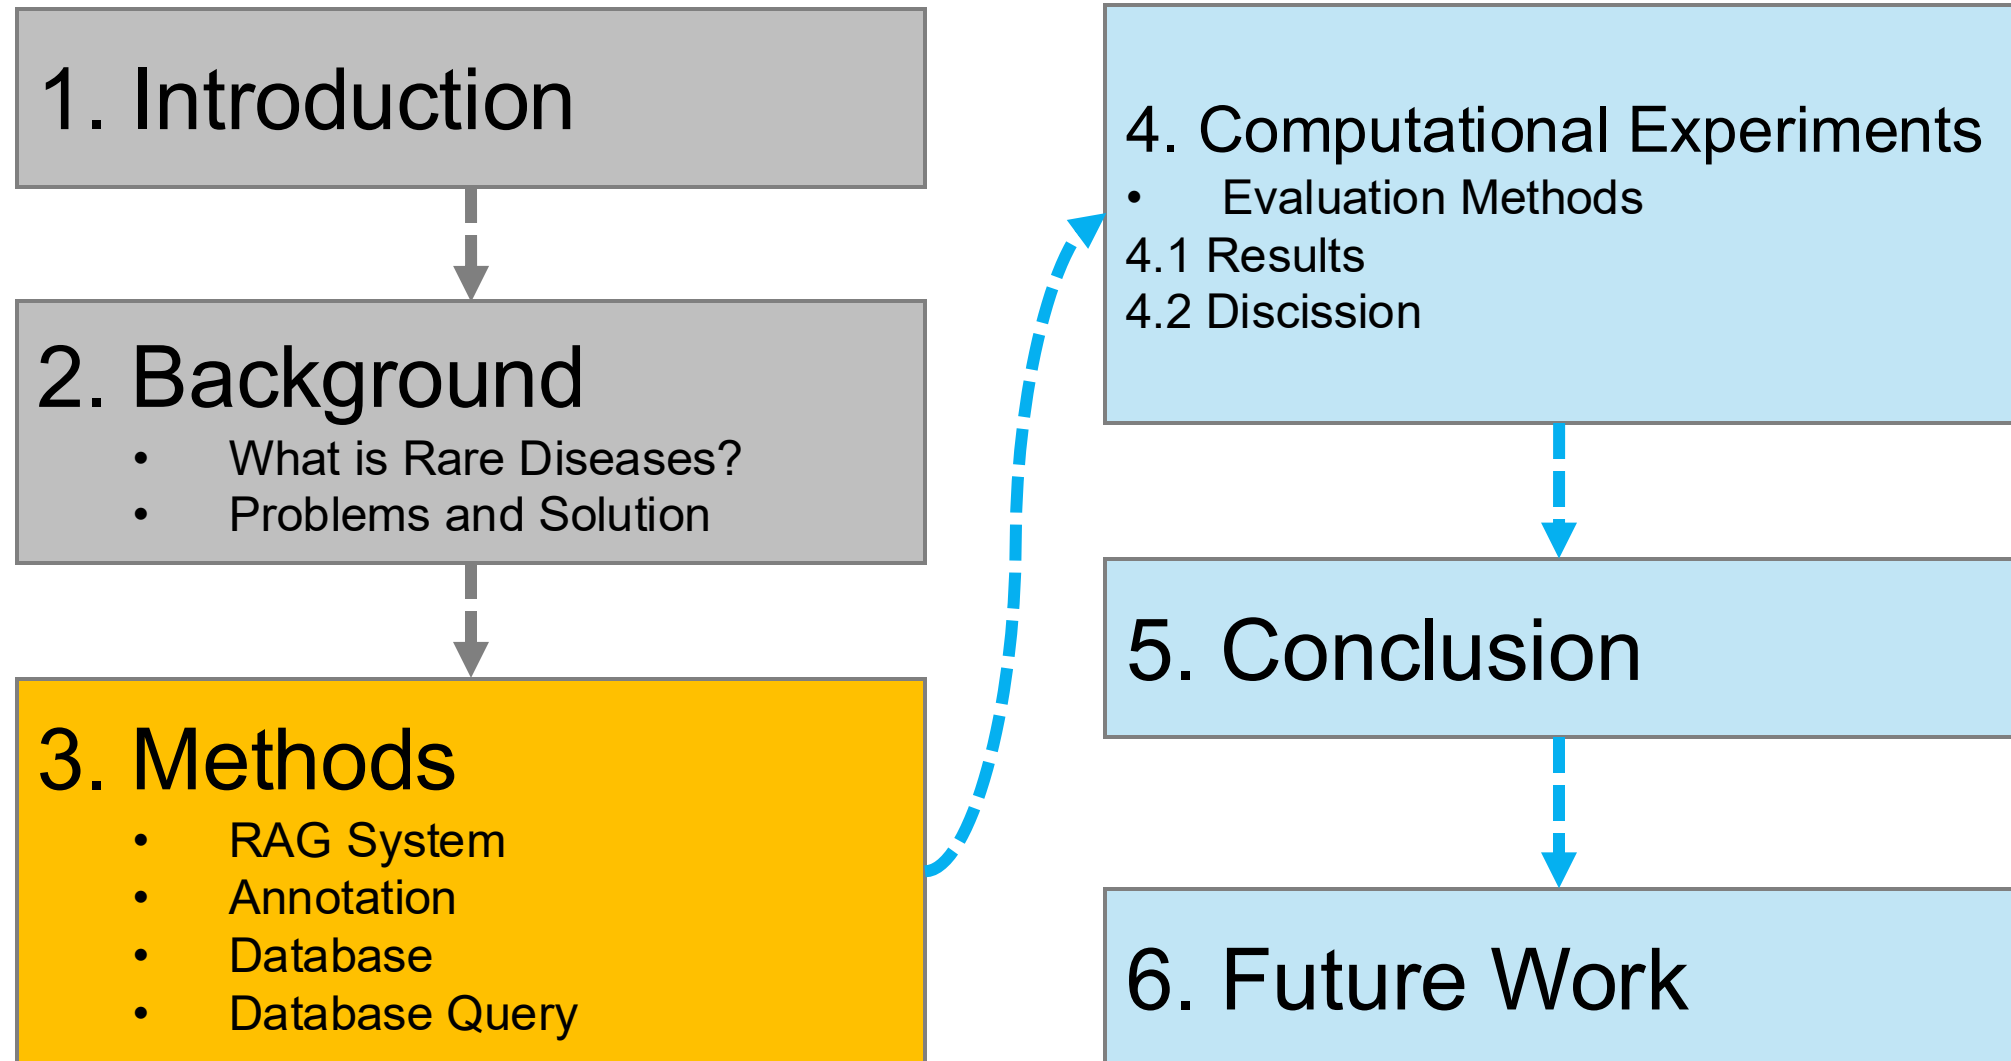

**Database with Medical  
Literature Published in 2023**

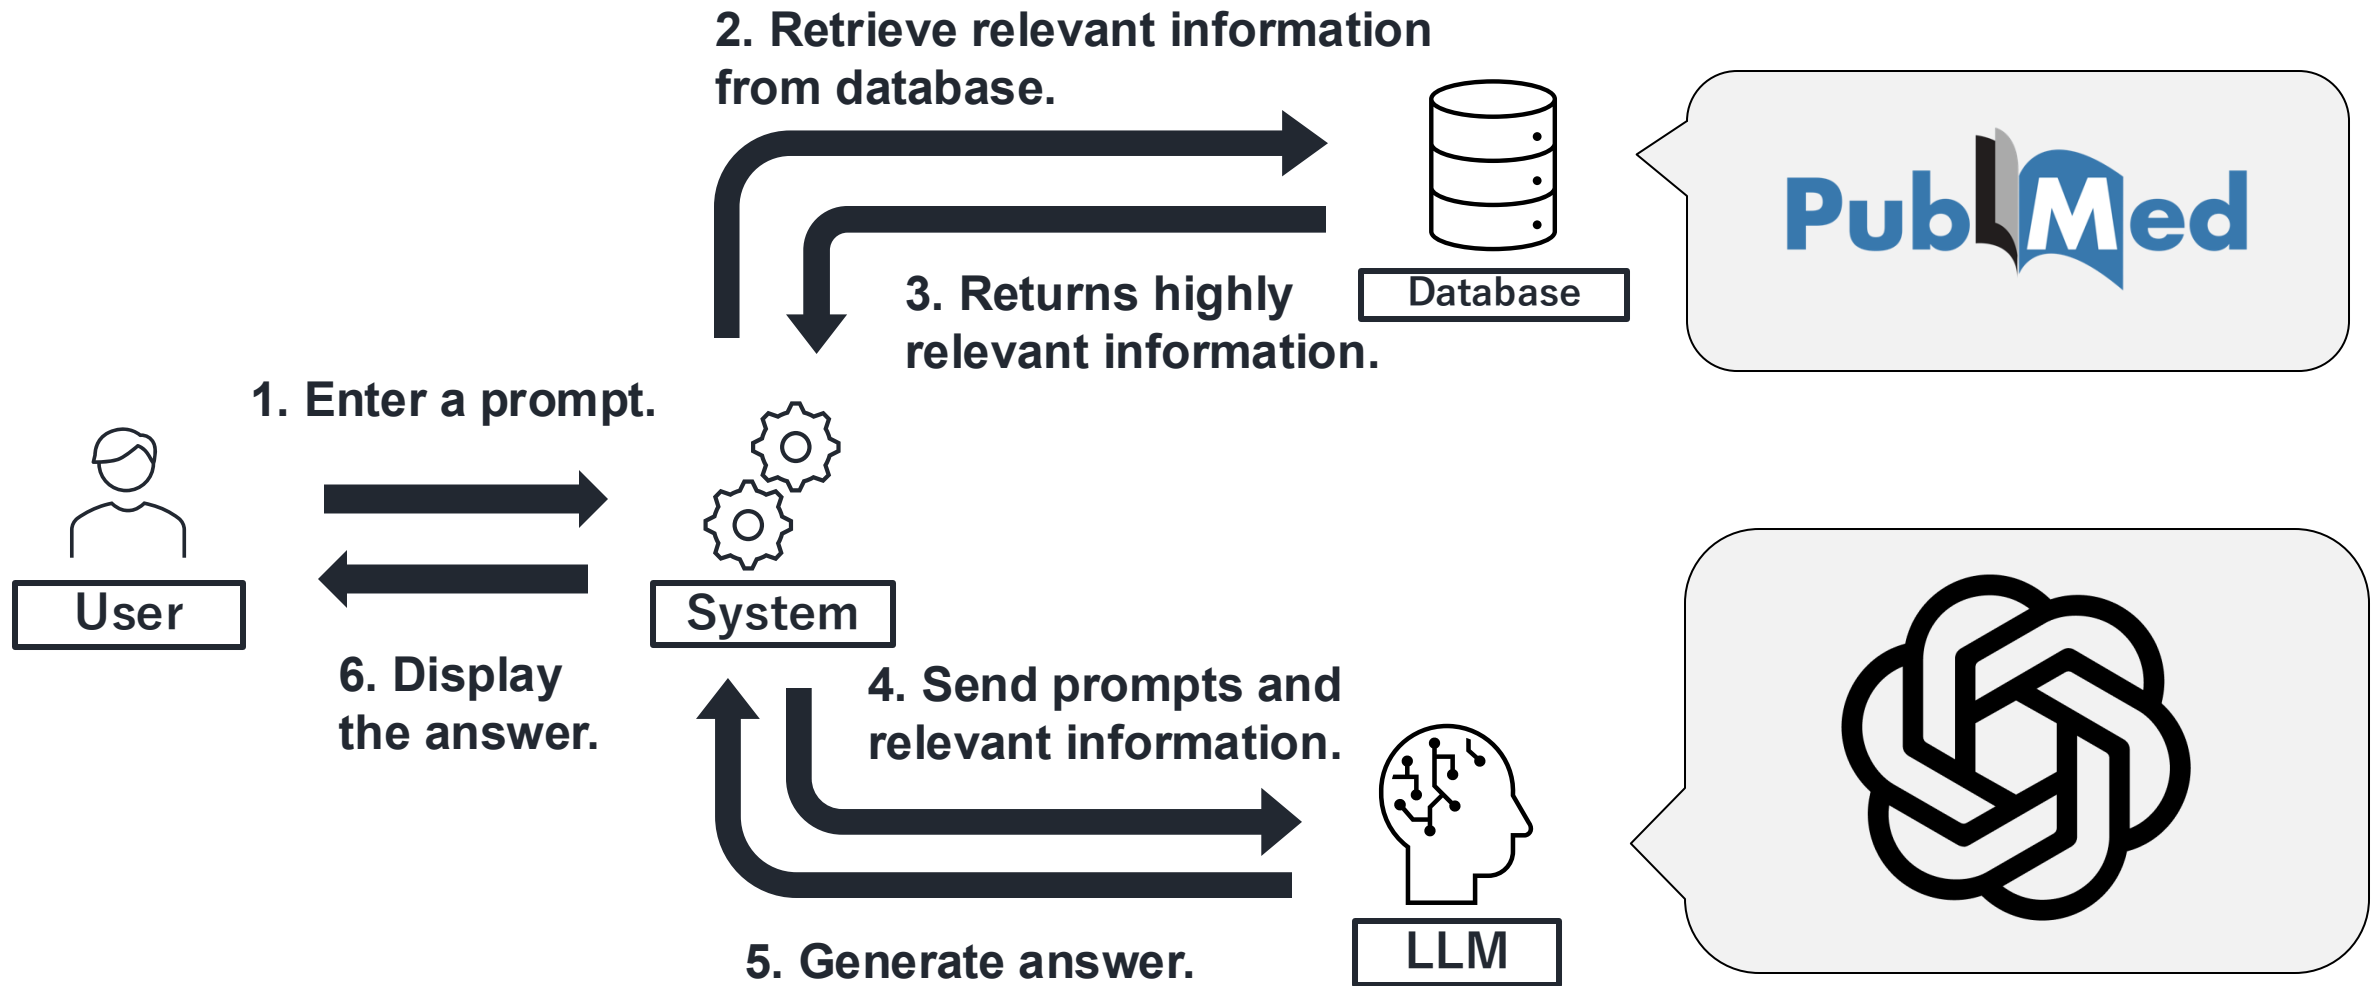

# OpenAI

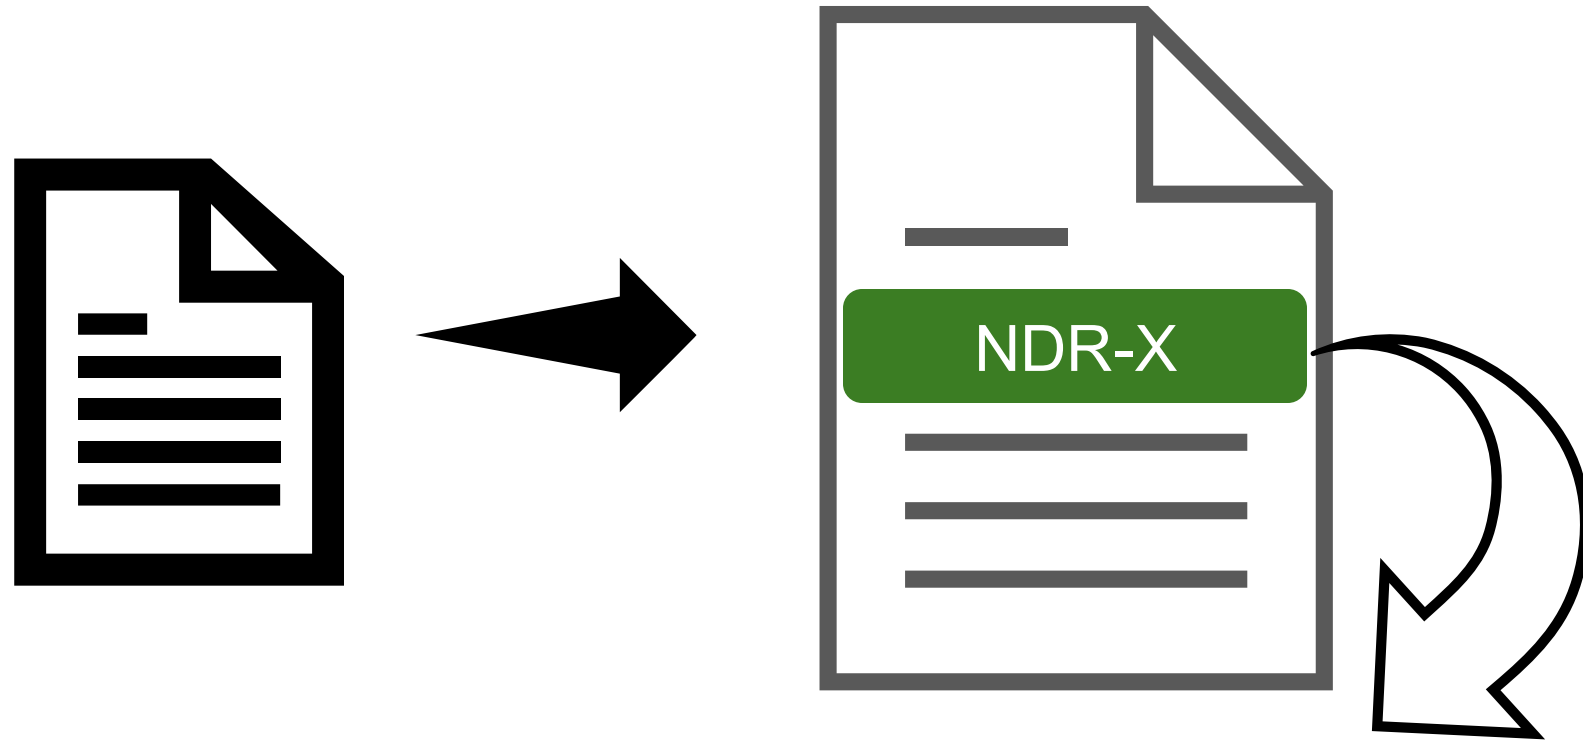

# Contents

# Methods – RAG System

# Methods - Annotation

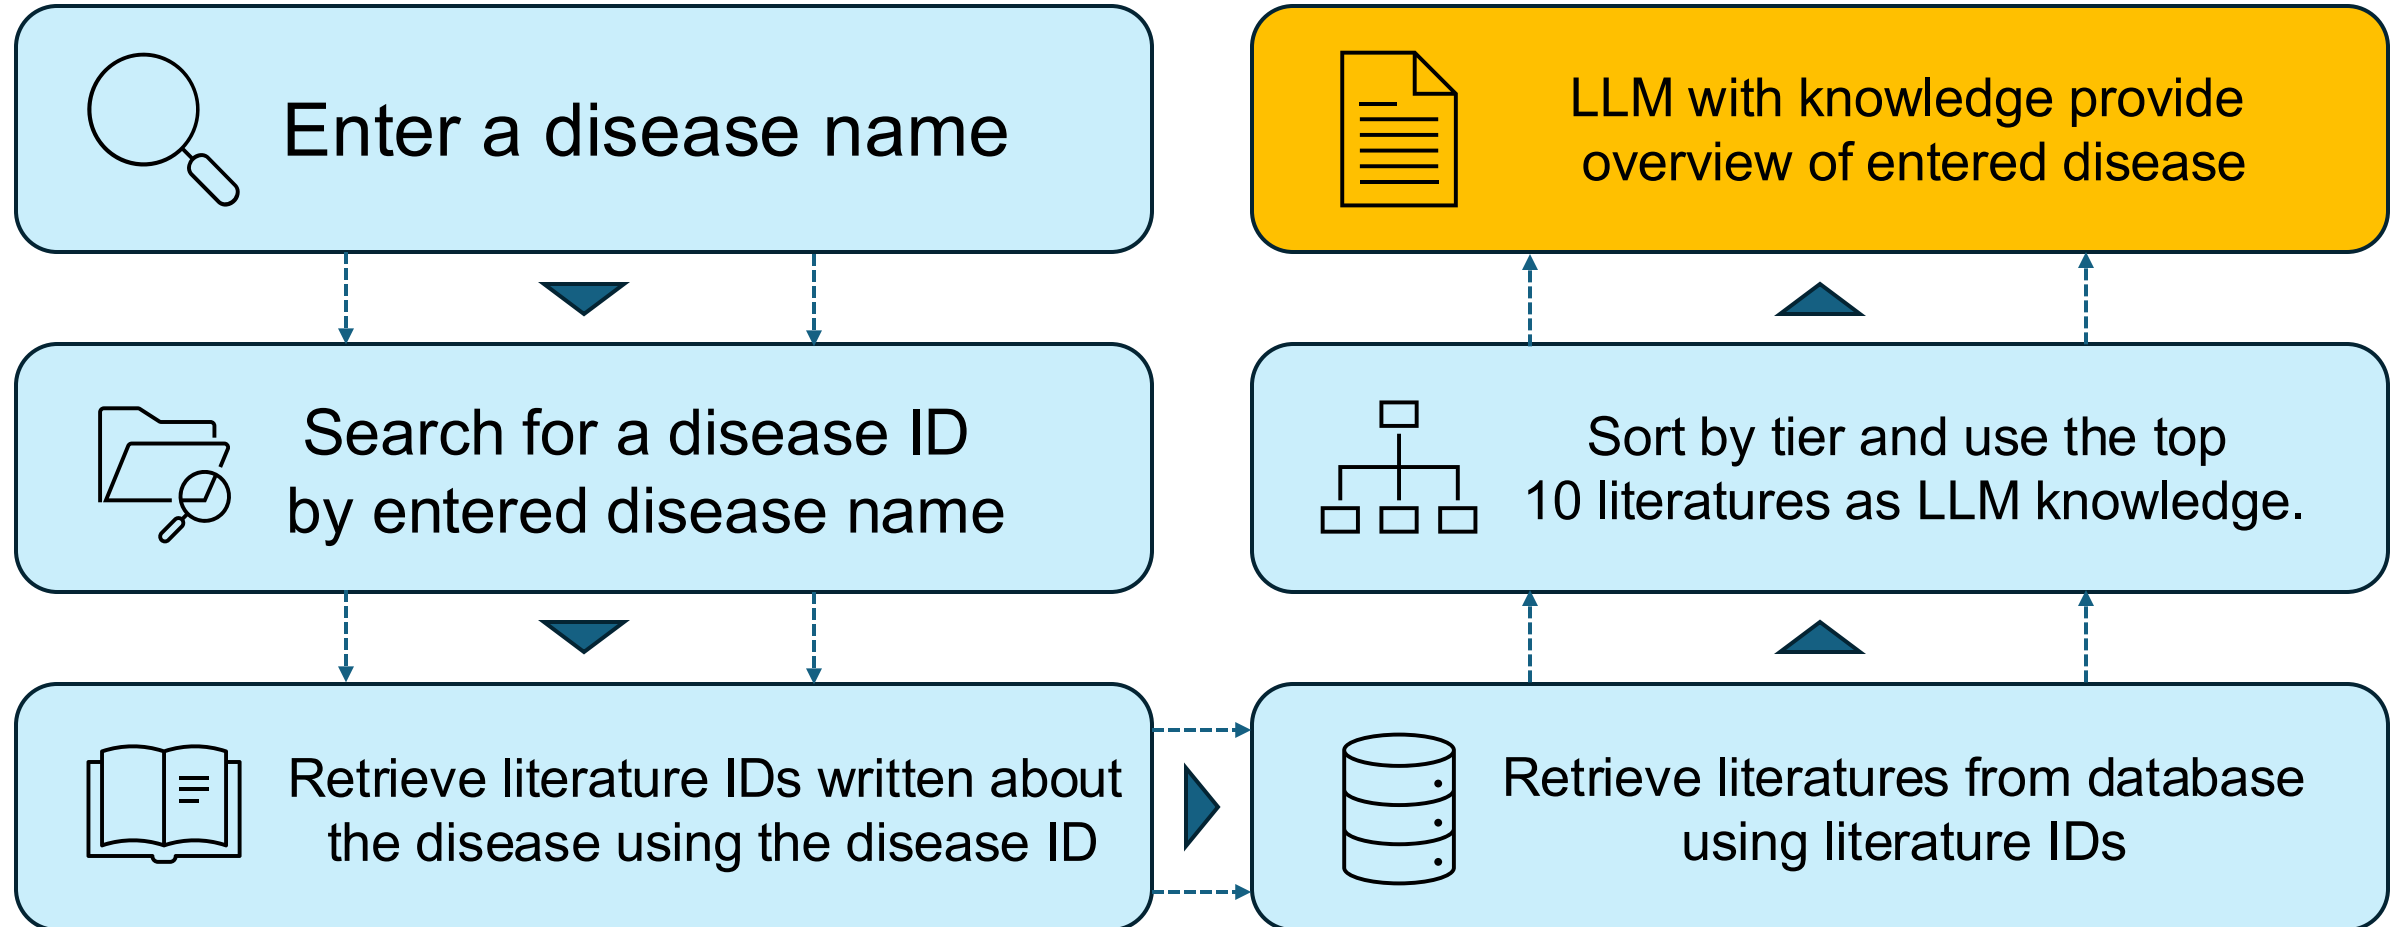

Disease: NDR-X (Non-diagnosable rare disease X)

# Methods - Database

# Discussion

# Discussion

Sharing the same framework cause a few bias toward Standard GPT-4o

# Contents

# Conclusion

## What we achieved in this study

A rare disease database was developed to implement RAG system that outperformed standard GPT-4o in multiple evaluations.

# Future Work

---

- **Database Usage** - We'll investigate additional ways to leverage and **expand the use of database** we developed.
- **Limited Input** - Currently the input is **the name of the disease**, so we would like to be able to identify it **from symptoms and other information** in the future.
- **Interfaces** - Our goal is to make it **user-friendly for patients, their families and doctors**, to do so, development of an application such as GUI is necessary.
- **Data Limitation** - Currently, the medical literature in the database are limited to those published in 2023. To ensure the comprehensiveness of the information, we aim to **include all literature indexed in PubMed**.

# For Questions Answering

Study Characteristics

# For Questions Answering

# For Questions Answering

20  
/ 38

RAG-implemented model scored higher

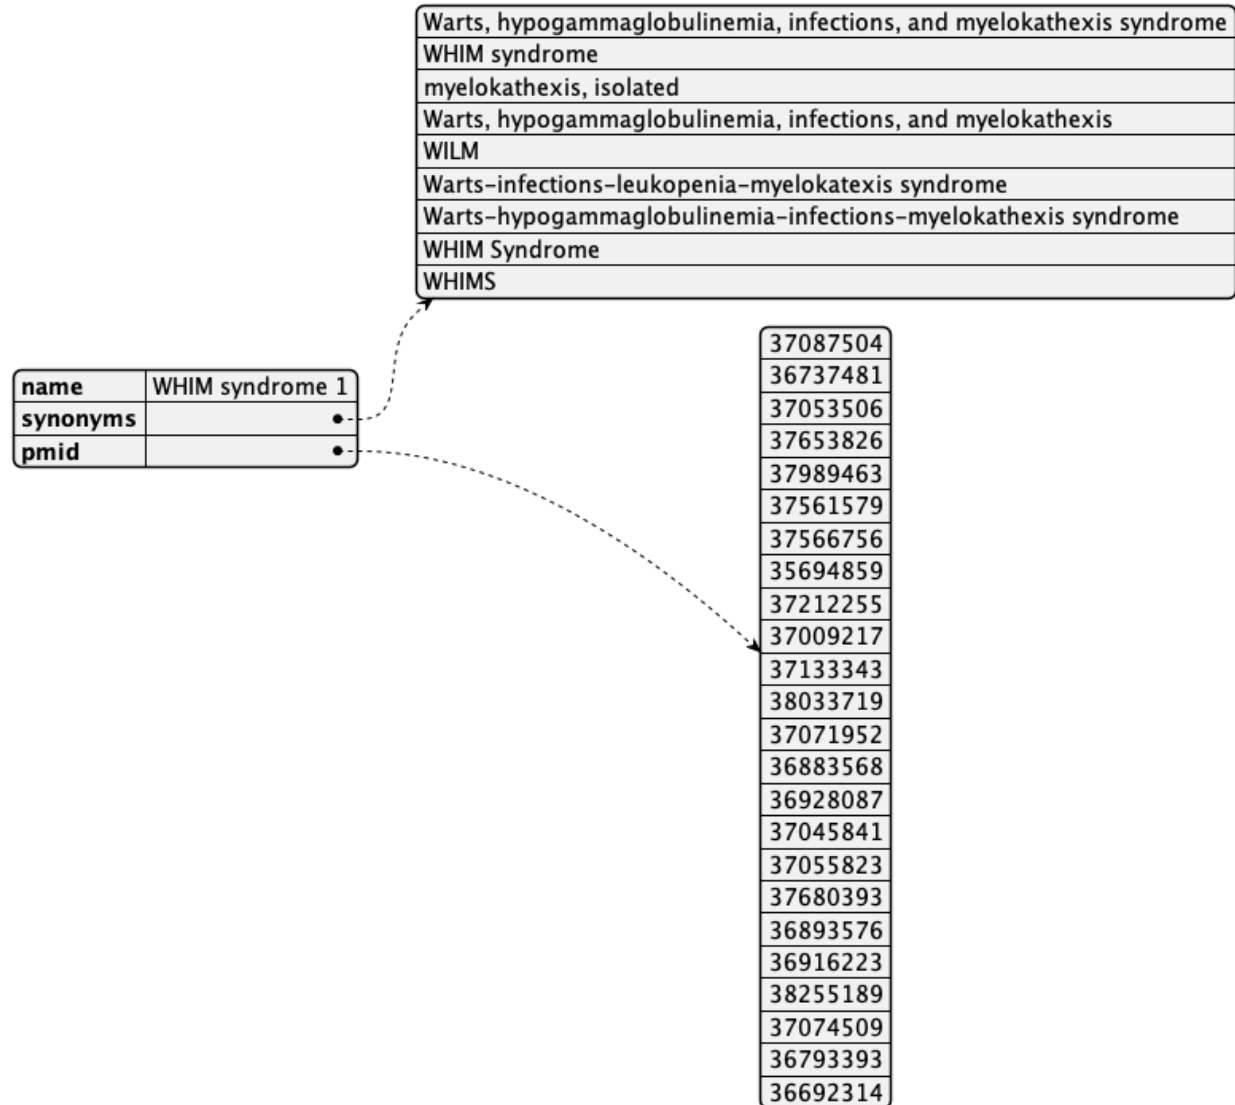

7  
/ 38

Normal GPT-4o scored higher

9  
/ 11

They scored equally but got full score
